Fedora Websites 3.0

Delving into a contributor-friendly semantic website

We set out to achieve

Goals for refreshed websites

Reminder of our initial goals

What did we plan on accomplishing?

- Create and maintain a website that is both modern and friendly, with easy navigation and a logical structure
- Make it simple for new contributors to locate the information they need in order to contribute to the project
- Serve as a model for other Fedora Websites of a smaller scale - eg. for Spins, ARM, Alt, Mirrors, Docs, Start etc
- Connect all Fedora Linux editions, spins, and versions and make it simple enough to be used for both existing and new users

Modern, friendly and logical

Did we accomplish our targets?

- The newer websites have a streamlined navigation structure to lead users to the Fedora Linux offerings they are looking for
- While looking more sophisticated, the websites continue to look user-friendly to both audiences with bigger screens or small
- Speaking for the functionalities that the offerings provide, the newer websites provide a lot more important details
- A dark mode is now made available that is compliant to both system theming as well as manually switching over

Contributor-focused processes

Did we accomplish our targets?

- The team has been running workshops, usability testing activities and mock-up design surveys on a regular basis to get feedback.
- Not just the development, deployment and design, the team processes themselves have been detailed about in the documentation.
- Documentation related to the codebase have been regularly written and actively maintained alongside the relevant codebase repository itself.
- To ease contribution from non-team members, an easy-to-use content management system is implemented in the refreshed websites.

Exemplary implementations

Did we accomplish our targets?

- The components for the refreshed websites have been developed to be modular in nature to allow inclusion in other projects as well
- Renewed versions of the Fedora Start Page is being designed and developed in the same lines of the refreshed websites design language
- Renewed offerings websites for Fedora Silverblue and Fedora Kinoite have been recently sent out to deployment using the same stack
- We plan on using the design elements and website components in developing the frontend for the Fedora Badges frontend down the road

Everything at one place

Did we accomplish our targets?

- Our new home is now located at fedoraproject.org and everything else is a trailing URL pattern to be added after the home location
- Paths to contributor focussed applications, services and documentation are all linked together in the comprehensive top bar
- Forums to connect with the contributors for opportunities and with the users for questions are easily accessible from the main landing page
- The home page to Fedora Project has indeed become a hub that serves to everyone, regardless of them being a contributor or a user

Community Update

Fedora Websites 3.0

are out now!

(cc) BY-SA

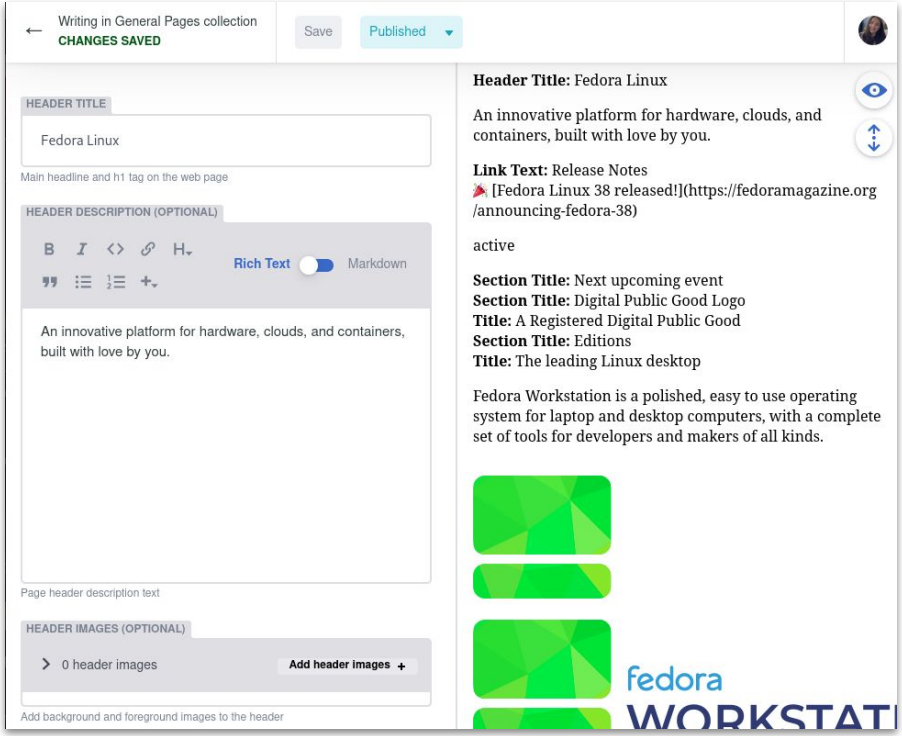
Enough talking...

Let us take a look

Let's talk CMS

Content Management System

- Allows contributors to build and manage a website without having to go into the codebase.
- Creates merge request on behalf of the user with the changes made.



(cc) BY-SA

Use-case Scenario

Updating a graphic

What do I need?

- Access to CMS
- Access to GitLab
- Graphic / or content that needs updating
- Website side-by-side with CMS (optional)

(cc) BY-SA

Get Involved
