# Fedora Project Presentation Template

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Aliquam dignissim eleifend purus, ut consectetur ligula scelerisque eu. Nullam ultricies, sem id rhoncus condimentum, augue lectus.

## How to use this deck

Read this before getting started

Before you begin working, always fork the deck. Click "File > Make a Copy" to build your own version.

To access the deck's pre-formatted slides, click either the "Layout" toolbar button or "Slide > Apply Layout" in the menubar.

# Fedora Badges 2.0

Revamping our Favorite Web App <3

Emma Kidney Marie Nordin Akashdeep Dhar Sandro

# What's Fedora Badges 2.0?

Who, what, when, where, and why.

A little over a year ago another push to update Badges started

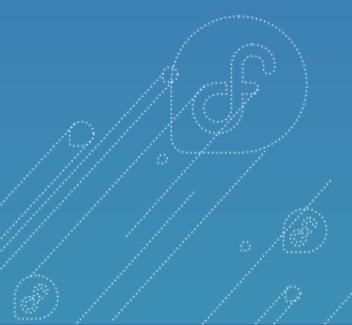

- Fedora Badges is 10+ years old 👵 👵
- We had some great testimonials about \*why\* we love badges as a community
- A group of us got together to discuss what we would need to do to revamp the project
- We realized we needed three things:
  - New backend
  - New frontend
  - New art (this was already in progress
- We meet once a month on a call, and we have two Element chats
  - The usual Badges channel
  - A Badges Development channel

# Backend

# **Revisiting Tahrir**

What has changed over the years?

## Simplified Access

APIs have become the de-facto primary means of interacting with the service

#### **Faster Backend**

Using asynchronous functionalities, the backend has become performant

#### **Better Interaction**

Websites are attempting to mimic the look and feel of a native desktop/mobile app

#### **Efficient Database**

Handling operations with database have become simpler with abstraction layers

# Revamping Required

What do we need from the service now?

#### **Open Ecosystem**

Enthusiasts would be able to write applications to use the API backend service

### **Boosted Efficiency**

Best performance would be ensured using the recent libraries and frameworks

### **Application Like**

Reference frontend would look more akin to an application than a website

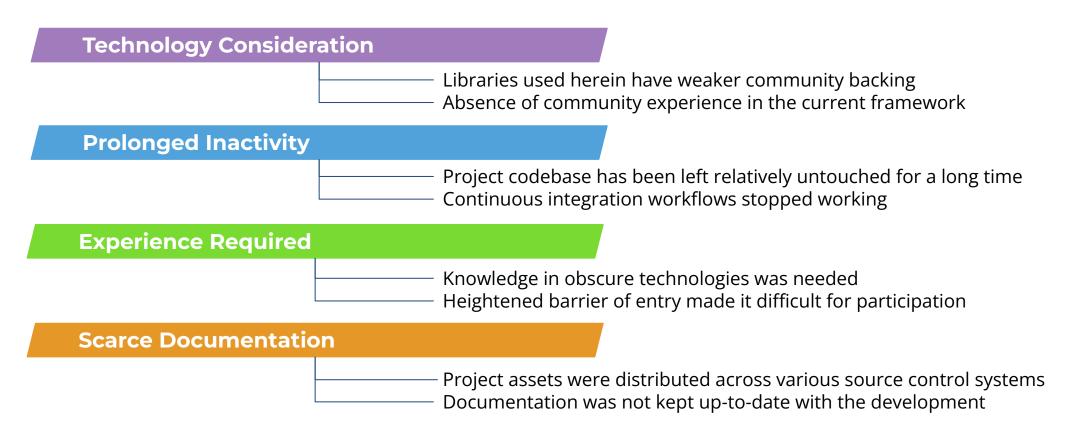

#### **Inclusive Process**

Exhaustive docs and established standards are used to encourage participation

# Why Not Revitalize?

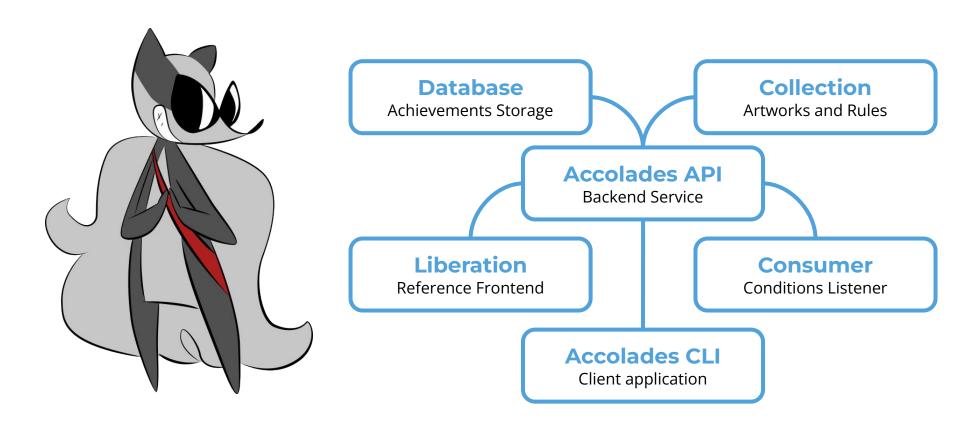

Why we think that using the existing codebase is not a good idea?

## Two Point OH

Is there a plan for creating things again from ground up?

## More information

Where do I look for it?

- *Technological investigations*<a href="https://fedora-arc.readthedocs.io/en/latest/badges/index.html">https://fedora-arc.readthedocs.io/en/latest/badges/index.html</a>
- **Project repository**<a href="https://gitlab.com/fedora/websites-apps/fedora-badges">https://gitlab.com/fedora/websites-apps/fedora-badges</a>

# UI/UX

# Why Revamp?

- Current look is out-dated and uses old branding
- Accessibility to information is limited
- Nice to align with other Fedora branded websites and applications

## Community Feedback

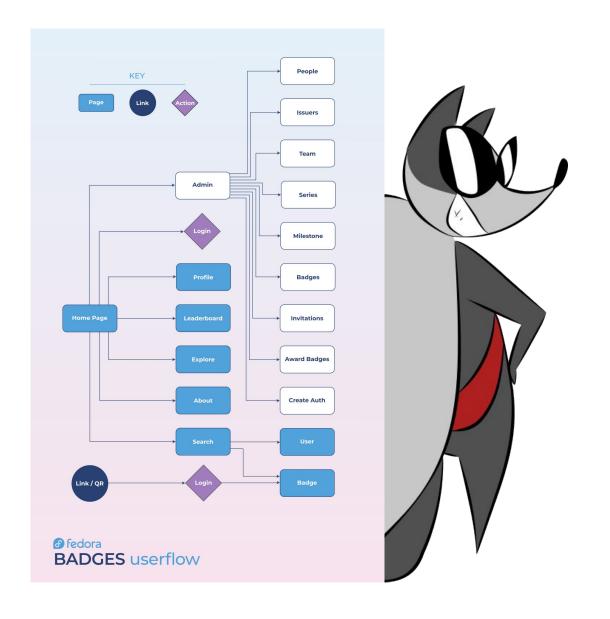

- Last month, Fedora Badges Front-End questionnaire was run
- Satisfactory amount of participation
- Info-graphic displaying this information is being prepared

## **User Flow**

A visual representation of how the user moves through a website

- Help visualize all the pages of a website and the path to get there
- Admin pages are in white not everyone has access to these

## Lo-fi Wireframes

Low-fidelity wireframes are basic wireframes that outline blueprints for web pages.

- A general look and feel for what the Fedora Badges website could look like.
- No major changes to the architecture
- Gather feedback from the community regarding the current direction.

## Hi-fi Wireframes

High-fidelity wireframes are a more complete visual representation of the framework.

- Early stages
- Mock-ups will be posted on Discussions for feedback and worked on until satisfied.
- Similar approach to the Fedora Website Revamp.

# Next Steps?

- Mock-ups will be posted as they are done on Discussions for feedback.
- Work with the community until (mostly) happy with new look.
- Keep your eyes peeled!
- This will take some time

# Graphic Design

# Modernizing Fedora Badge Designs

Why update the art?

Fedora Badges was created over ten years ago 😮 a lot of things have evolved:

- Graphic design standards
- Fedora's brand
- Design contributors

And we've also learned things:

- What we want our standard to be
- That our old badge template was wonky
- Badge aesthetics have grown

## New Templates

Something contemporary!

Last summer Outreachy intern Nikita Tripathi updated our badge template

## Original

- More White Space
- Drop Shadow on BG
- Works with Light mode only
- Slight error in vector
- Mathematically balanced

## **New Version**

- More focus on Graphic
- Simpler
- Dark Mode Compatible
- Good vector sketch
- Visually balanced

# New Style Guide

### New and improved!

Last summer Outreachy intern Nikita Tripathi worked on updating our Style Guide

BADGES STYLE GUIDE → PALETTES & PATTERNS PALETTES: **COLOR PAIRINGS** Sometimes choosing the right color for the badge elements can get confusing. A good trick of trade is to select a column of 3 colors from the Fedora color palette.

# New Badge Art

### So shiny!!

Chris Idoko and Roland Taylor were this summer's Outreachy interns, working together to update the badge art

## So what's left to do?

#### **Badge Art**

Chris and Roland did a lot of heavy lifting on the badge art- completing updates to over 300 badge designs

There are about 300 **more** designs to complete as well as open requests!

#### **Style Guide**

After implementing the template with Chris and Roland- we have some new learnings to incorporate into the Style Guide.

There are also some small design improvements to be made.

Smera & Marie will be working to complete this.

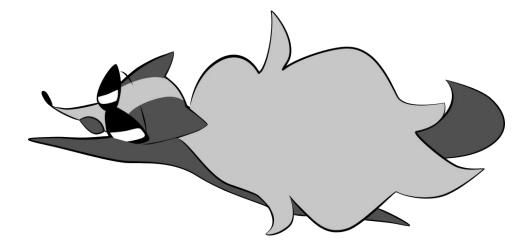

## So what's left to do?

#### **Documentation**

Once the Style Guide is finalized and the badge art complete and implemented, we will update the "How to Design a Fedora Badge" docs page to reflect the changes.

#### **Implementation**

We will work in sync with the developers who are rebuilding the system to make sure the specs are working as planned during implementation.

# Thanks! Questions?
