Objective Updates

Back to the drawing board

The Fedora Project - Logic Model for Websites & Apps Objective

Resources	Activities	Outputs	Outcomes	Impact
people, time, money	**the work we do**	**tangible results**	**measurable benefits**	**the high-level goals**
Badges team to create badges. FCAIC and Design team for team swag. #action riecat	Create team badges https://badges.fedoraproject.org/badge/rock-the-web! Request team swag.	Badges! Team swag!	The team is happy, excited, recognized, and rewarded.	**Mission** To reboot the websites team to include webapps in the scope of work and set up the team so that they can grow capacity in the future to build new exciting apps to meet community needs.
Developers working on møte. Infra team or CPE for updating where it runs. Rick to mentor in porting Spins website?	Develop new version of møte. Update spins website to new framework.	At least one webapp (møte) is modernized, as well as one web site (spins/labs).	The team has experience and ability with updating legacy Fedora webapps and sites.	
Program management team to help with documented processes. (#action bcotton). Docs skills to update team docs.fp.o website (#action relrod+jwf).	Document new release procedures and roles. Document specific team member responsibilities for release days and other critical needs.	A documented plan for updating websites on new Fedora Linux releases, with understood team roles and responsibilities.	The Fedora websites are reliably updated when new Fedora Linux releases come out.	
OSPO and CPE list of existing apps. Someone to build a comprehensive map. Designers to work on best pratices for unified UX.	Inventory the existing apps and websites and decide what can be done about each. Where possible, mark older versions of websites as "outdated" and redirect to proper place. Encourage users (via design, documentation, and communication) towards the newer, maintained tools	A selected list of apps and websites with service level expectations. The websites in use are the most maintained ones.	The team knows what they're focused on, and that focus meets user needs.	**Vision** Fedora has an active, engaged team that takes care of our main websites and all of our various community webapps. New folks who show up with an interest in code contributions find this an easy place to jump in. Members of the team are empowered to do the work they're interested in and are connected to the other parts of the project related to getting those things done.
Fedora Docs team for documentation operations ("doc ops"). Websites & Apps team to maintain the documentation content.	Add new modules to the Fedora Websites docs based on different apps. Gradually migrate old docs in GitHub to the Docs repository.	A continuously curated list of issues and tasks, organized by skillset and interest.	Information about Fedora Websites & Apps is accessible and easy to find.	
The team and people interested in doing the triage work. Program Management team may help here too?	Regular meetings for the team that include triaging the W&A repo. [Smaller task: update repo with new tags]	Updated Fedora Websites documentation that explains the inventory of websites and how to get involved.	It's easy to find tasks for every skill level and interest.	
The team and people interested in doing the triage work. Program Management team may help here too?	Continuous review of incoming work; create reports showing response time and regularly reflect on those metrics.	A documented process is in place for making sure requests (both PRs and requests for work) are triaged in a timely manner.	Requests and PRs are handled promptly.	
Interested team members. Mentorship training provided by Council.	Define Website Apprentice & mentorship role.	"Websites Apprentices" program in place, and connections with Fedora Infrastructure team established.	Mentorship is available, both for interested new members and for all members needing to get things done in Fedora infrastructure.	
Mindshare team to help onboarding. Someone to update docs in project docs.	Create updated process for Web & Apps Team Rep to Mindshare and implement.	Fedora Mindshare Committee has an active, engaged representative to represent Fedora's Websites & Apps community.	Websites team is participating in the Mindshare Committee.

fedora

Objective Updates

Back to the drawing board

- Documentation is actively being reworked for
  - Contribution
  - Development
- Reevaluated the big picture and set the expectations right for the team and the objective, as a whole
- Obtained more contributors for active projects as a part of Outreachy
  - 2 interns and 4 co-mentors
- Kicked off the Fedora Websites Revamp discussion

fedora

Goals

What do we plan on accomplishing

- Create and maintain a website that is both modern and friendly, with easy navigation and a logical structure.

- Make it simple for new contributors to locate the information they need in order to contribute to the project.

- Serve as a model for other Fedora Websites of a smaller scale - eg. for Spins, ARM, Alt, Mirrors, Docs, Start etc.

- Connect all Fedora Linux editions, spins, and versions and make it simple enough to be used for both existing and new users.

fedora

Team Updates

Team work to make a dream work

$ strategies & approaches

- Begin by developing a Proof-of-Concept with a tiny website, and if successful, move on to a larger one.
- Choose a suitable website, get feedback on the initial design, then iterate on the overall design based on the input.
- Examine individual design concepts, consider stakeholder feedback, then execute the best of the bunch.
- Keep use-case-specific paths evident for new users, while also making all of our alternatives simply discoverable and accessible.

fedora

$ fedora-websites

Revamped the **contribution documentation** to better suit the current needs.

Documentation additions in **Developer f.p.o**. for helping with **Git** and **Podman**.

Implemented CI to **live build-and-deploy testing** websites on pull request.

Faster addressing of new **issues** and **pull requests** to the project repository

Reworked **interactive JavaScript-based picker** for varied languages on websites.

Made misc. **rephrasing**, **picture changes** and **live image** hash corrections.

websites@lists.fedoraproject.org

$ fedora-easyfix

Initiated active discussion with the community in **Mindshare** and **Discussion fp.o.**

Strides decided for **curation** of the **repository listing** and **issue documentations**.

Converted repo gathering from wiki to **inbuilt YAML-structured file** for better consistency.

Made project modular by the use of **YAML templates** and **containerization**.

Set up the project as with **Python Setuptools** for easier deployment and checking.

Added extensive use of **Pagure API** to fetch **Libravatar data** and **FAS information**.

fedora

$ mote

Initiated active discussion with the community in **Mindshare** and **Discussion fp.o.**

Strides decided for **curation** of the **channel listings** and **meeting logs/summaries**.

Reworked the **look-and-feel** and **interactivity** with **mobile-first design** choices.

Used **asynchronous JavaScript** for **quicker search** and **faster meeting indexing**.

Set up the project as with **Python Setuptools** for easier deployment and checking.

Various **quality-of-life** fixes and updates to improve the **overall functionality**.

fedora

Get involved

What are you waiting for?

Thank you!

(We look forward to meet you!)
